

“The Weaponization of Water in the Middle East and Africa”

Marcus King

*Associate Professor of International Affairs
George Washington University*

Overuse, population growth, and climate change are turning water into a tool for conflict. Violent Extremists Organizations (VEOs) have seized upon this opportunity to weaponize water. Using examples from Syria and Iraq, the Sahel, and the Horn of Africa, this lecture will elucidate emerging approaches toward weaponization, and suggest actions national governments and the international community can take to discourage water weaponization in modern conflicts.
